# Gut zu wissen

## Licht ist Leben

Für das Wohlbefinden und die Gesundheit braucht der Mensch Licht. Wird die Lichtqualität den jeweiligen Bedürfnissen des Menschen angepasst, so steigert dies die Lebensqualität und unterstützt den Menschen bei seinem Handeln und Tun.

## Licht für zu Hause

Licht in Innenräumen ist deshalb so wichtig, da es den natürlichen Bedarf des Menschen an Tageslicht abdeckt. Licht ist wichtig für die Gesundheit – Licht verbreitet Sicherheit.

## LED für zu Hause

LEDs bieten für die verschiedenen Wohnsituationen eine Vielfalt von Beleuchtungsmöglichkeiten und sind dabei energiesparend (siehe Tabelle „Wirtschaftlichkeit“) und umweltschonend. Neben den LED-Leuchten, die wir inklusive LED-Leuchtmitteln anbieten, lassen sich nahezu alle unsere Produkte auch mit LED-Retrofit - Leuchtmitteln ausstatten.

## LED

- ist umweltfreundlich (geringerer CO<sub>2</sub>-Wert/kein Quecksilber)
- ist durch hohe Lichtausbeute energieeffizient
- ermöglicht Designvielfalt durch kompakte Bauform
- benötigt keine Aufwärmphase/Startzeit
- erlaubt hohe Schaltzyklen
- ist wartungsfrei
- hat eine lange Lebensdauer (siehe Tabelle)

## Lichtstrom

Lumen anstatt Watt. Für die Ermittlung der Lichtstärke ist die Angabe des Lichtstroms (lm = Lumen) entscheidend. Die LED - Technologie führt zu immer besserer Lichtausbeute (siehe Tabelle). Bei viel geringerer Stromaufnahme (gemessen in Watt) werden höhere Lichtleistungen erreicht.

## Farbtemperatur

Neben der Helligkeit spielt bei der Wahrnehmung von Licht auch die Farbtemperatur (siehe Tabelle) eine bedeutende Rolle. Diese wird in Kelvin (K) angegeben. Je niedriger die Kelvinzahl, desto wärmer ist die Lichtfarbe.

# Short facts

## Light is life

*Humans need light for the well - being and health. If the light quality is adapted to the respective needs of the human being, then this increases the quality of life and supports the human being in his action and deeds.*

## Light at home

*Light in interiors is so important since it covers the natural need of the human being for daylight. Light is important for health – light spreads security.*

## LED at home

*LEDs offer a variety of lighting options for different living situations and are energy - saving (see table „economic efficiency“) and environmentally friendly. Besides of the LED lights, which we offer with LED illuminants inclusively, almost all of our products can also be equipped with LED Retrofit illuminants.*

## LED

- environmentally friendly (lower CO<sub>2</sub> value/no mercury)
- is energy efficient by high light efficiency
- allows design flexibility due to compact design
- does not need a warm-up/start phase
- permits high switching cycles
- is maintenance-free
- has a long life time (see table)

## Luminous flux

*Lumen instead of watts. In order to determine the light intensity, the indication of the luminous flux (lm = lumen) is essential. The LED technology leads to better and better light efficiency (see table). In case of a much lower charging rate (measured in watts) higher light powers can be reached.*

## Colour temperature

*Apart from the brightness, the colour temperature (see table) also plays an important role in the perception of light. This is indicated in kelvin (K). The lower the kelvin number, the warmer is the luminous colour.*
